

Cross

Inflatable Cross tents are a real eye catcher!

The Cross inflatable tents, made by QuinQ, can be used at any location for any event. Whether your event is in- or outdoor, these Cross tents will make the difference! A real eye-catcher that will promote your event or boost your brand like nothing else. QuinQ is your partner when it comes to mobility, high end products, creativity and tents that are easy to use.

Quality in every detail

QuinQ tents are made with the highest standards of quality. This is shown in the smart and innovative construction of the frame, ensuring that you get the highest level of functionality and user friendliness. Above all, QuinQ tents are made with the best quality materials that you can find. The tents and materials are tested to the limit, ensuring that they are water resistant, flame retardant and have UV-protection. Due to their smart, feather-light construction and low weight materials, QuinQ tents are easy to transport.

The Cross - Up and ready to use in 5 minutes

Making use of a unique single inflation system the Cross will be up and ready to use within minutes. Through only one valve you can inflate the entire tent! Once the Cross tent is up, there is nothing that needs to stay connected. The Cross tent is ready to use.

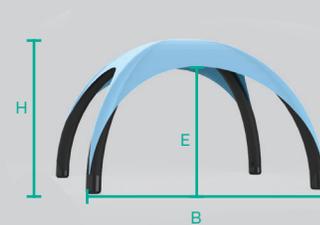

Cross One

The Cross One is the smallest tent in the Cross series. Due to the size, 3x3m (10x10ft), the tent is perfectly suitable for compact exhibit spaces. The Cross One is unique as it is the only Cross tent that is not constructed in a modular way. Therefore the Cross One is available in a 4 leg shape only.

The 'small' Cross One is 2,6 meters in height and the roof provides enough room to print your logo or company name. With a weight of only 8,7 kilogram and its compact pack size, the Cross One is easy to transport. The frame tubes have a smaller diameter. This ensures that the tent can be inflated in minutes. Inflating the tent can therefore even be done by using a manual pump.

Like all inflatable QuinQ tents, the premium-quality Cross One features high-end finishing. The tent is water resistant, wind stable, UV protected, flame retardant and highly durable.

Entrance height E	1,98 m
Weight	8,7 kg

Modular construction

Cross tents are available in different shapes and sizes. The Cross range includes the X3, that stands on 3 legs, the X4 with 4 legs and the X5 with 5 legs.

All these shapes are available in sizes M, L and XL.

Due to the innovative modular construction, the Cross tents can easily be transformed. For example, when transforming an X3 into an X5, all you need to do is exchange the centre HUB and attach the number of frame legs (tubes) that is needed. Just ensure that all tubes have the same size. This upgrade makes the Cross tents unique and adaptable for every event!

Base Package

The Cross tent base package includes the complete inflatable frame (centre HUB with detachable legs) and a roof.

Also included in the base package you will find a hand pump, repair kit and anchoring lines. This complete package is delivered in a strong, multifunctional bag, for easy transport and convenient, compact storage.

Accessories

The base package can be extended with handy and useful accessories.

You can for instance add sidewalls, a canopy, connecting elements, LED lighting, electric pump, trolley bag, anchoring bags, etc. Please go to www.quinqdesign.com to see all the possibilities or contact your local dealer to create the package that meets your needs.

LED Lighting

By installing the LED light on the inside of the tent you can create a spectacular scene during the evening. You can choose the colour that you prefer to light up the inside of the tent. This will make the Cross-tent stand out even more, adding something special to your event.

Flexible and expandable

Due to their modular construction, the possibilities to adjust or expand your Cross tents are endless. From the base package, containing one tent, to an entire tent village, you can create the setup that suits your event best. By either adding side walls and canopies or by combining various tent shapes and sizes, Cross tents can be catered exactly to your needs.

All Cross tents can be extended with a range of components, including side panels (also with access door or screen) and canopies. Using the handy 'CrossOver' panels, all Cross tents can be connected with each other, no matter the size, as long as they have the same shape.

Colours

The Cross tents can be ordered in a range of colours. The tent frame, roof, side-panels, canopy and CrossOver panels will be produced in the colour of your choice. Please check the available colour options on the colour scheme on the next page. Besides the choice of colours, you may also have your tent customized by printing your logo or graphics on the roof and side walls. Printing logos and graphics is done through high-quality heat transfer printing.

Print options and Customizing

Fully customizing your Cross tent is also possible. This option involves full-surface printing of the entire roof of the tent and/or any other tent parts such as side walls, canopies and CrossOver connection parts. In that case you send us the design, including all details like CMYK colours, graphics, logo's and any other images you would like to have printed. Full-surface printing is done through dye-sublimation printing. The result is a unique event tent that will amaze all your guests.
